

Since ID2 will contain pictures of Earth with some cloud coverage, the Husky needs to be able to differentiate between smoke plumes and normal clouds. Make sure the pictures of wildfires from space show a visible difference from normal clouds (ashy coloration, notes of flames, wind blowing smoke in a certain direction, etc.)

Wildfire from Space

- Store in ID1
- Press and hold learning button on an image
- Move the husky around to get diff angles while still pressing the learning button
- Release the button
- Go to next img and click learning button again during countdown to add to ID1

If there are pictures of Earth with some cloud coverage, make sure they are easily distinguishable from smoke plumes in ID1.

Normal Earth from Space

- Store in ID2
- Press and hold learning button on an image
- Move the husky around to get diff angles while still pressing the learning button
- Release the button
- Go to next img and click learning button again during countdown to add to ID2
